WHITEPAPER

XPENSE (XPE)

Native Token Of XeggeX Exchange

CONTENT

About

BUILT ON BSC

Xpense, symbolized as XPE, represents the exchange token for the XeggeX platform. XPE is the native cryptocurrency for the XeggeX exchange. Xpense operates on the Binance Smart Chain (BSC) as a BEP-20 token and can be used in facilitating fee payments on the XeggeX platform. Its primary utility (for now) is to facilitate user interactions on the XeggeX exchange. XPE holders enjoy benefits that enhance their trading experience. The aim is to provide a seamless, secure, and efficient trading environment.

By holding XPE in their accounts, traders pay less fees (described at XeggeX.com/fees) and if they pay with XPE they get a 25% discount.

Beyond fee reductions, XPE serves several utilities like promoting assets, creating liquidity pools, and paying for all other current and future fees.
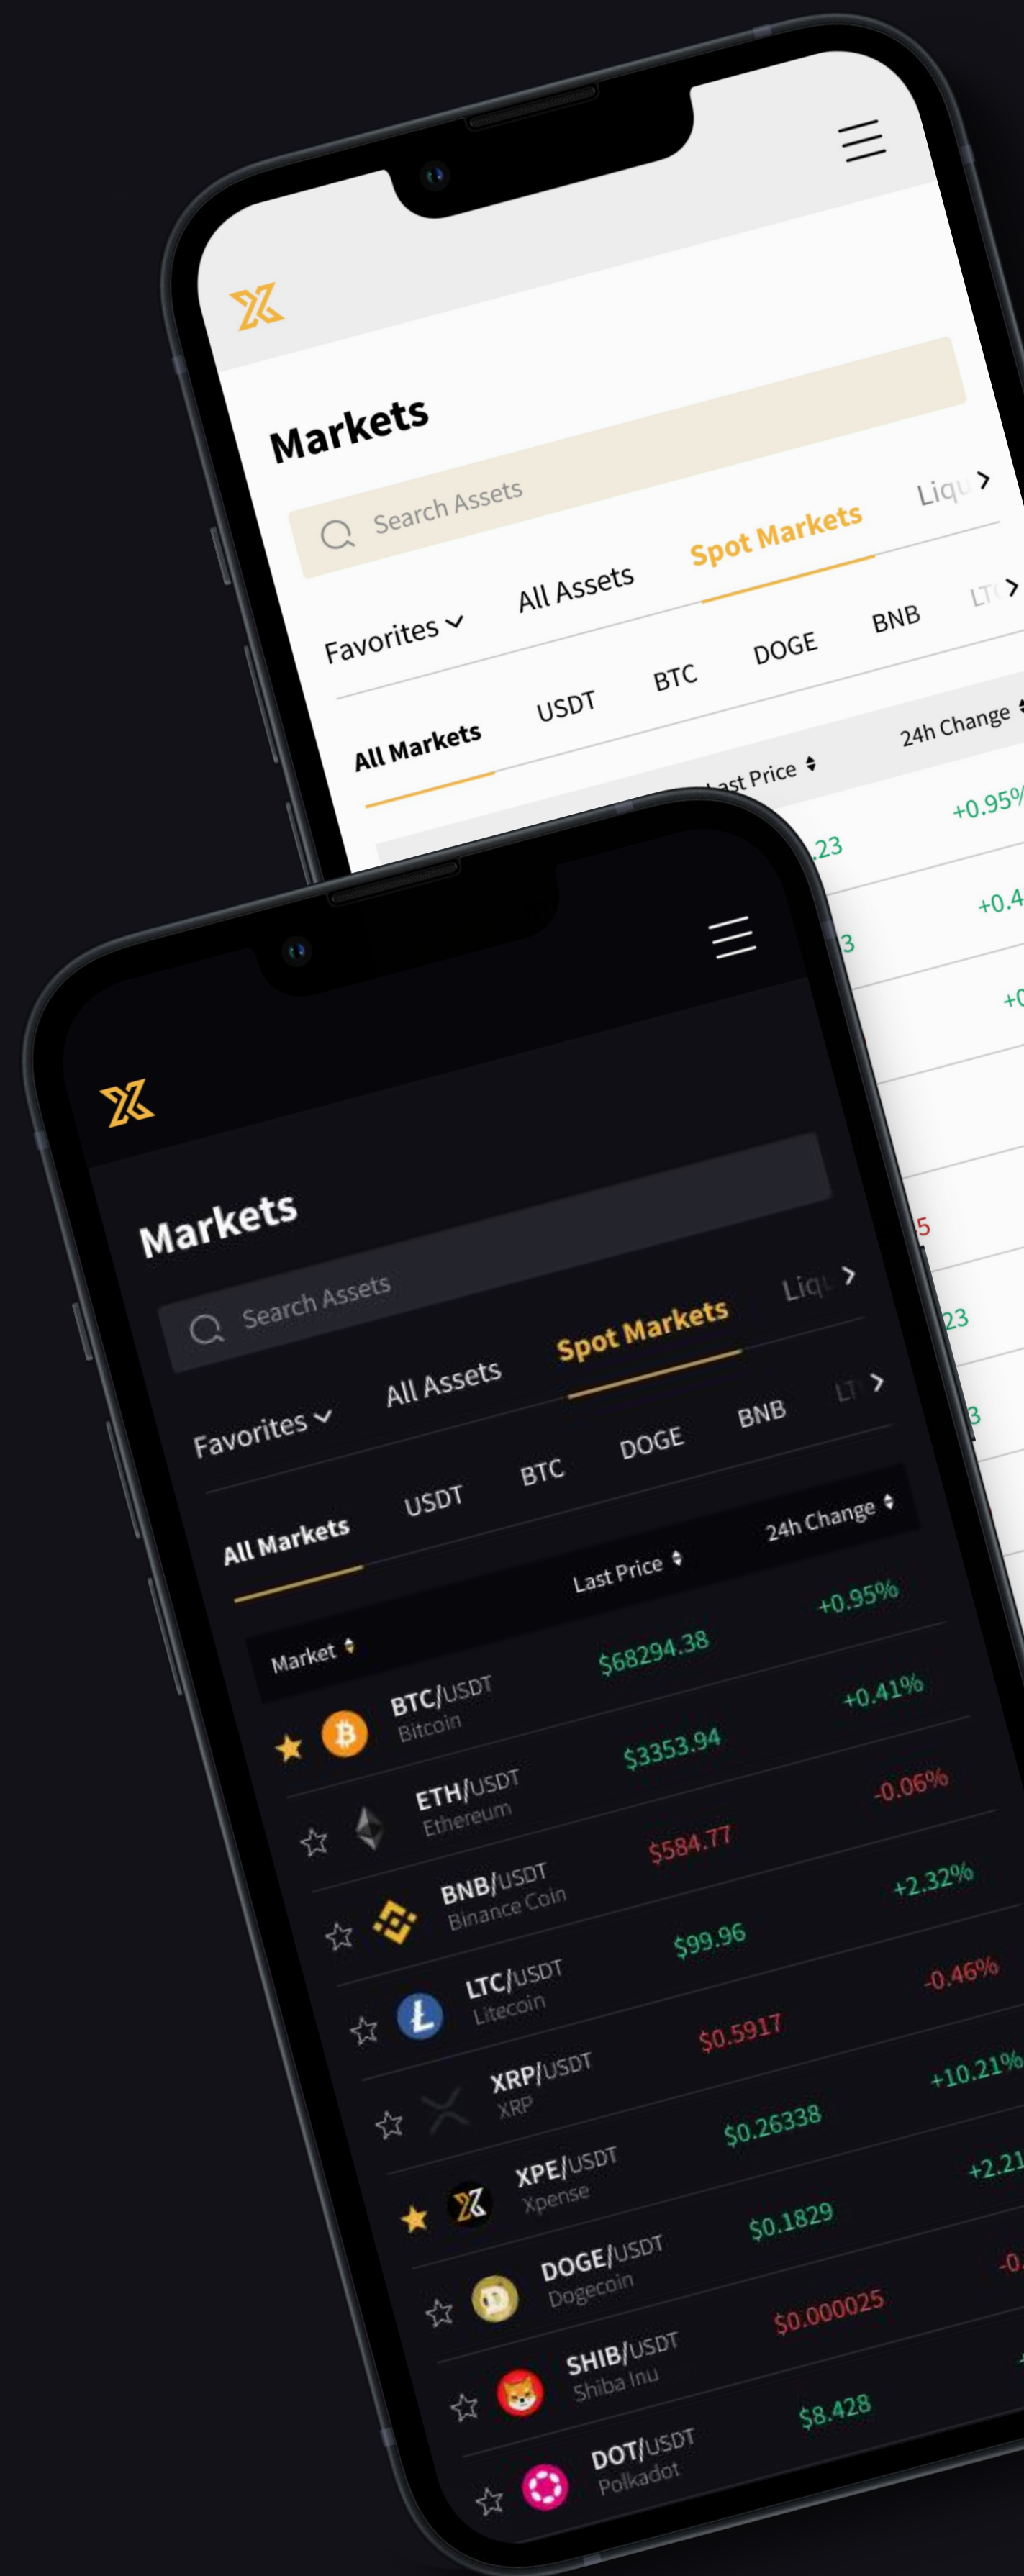

XeggeX
Exchange

Founded in 2021, XeggeX.com strives to provide its users with the best trading experience and give small and medium market cap assets a reliable trading hub. Our goal is to maintain a fast and user friendly system while also concentrating on security to keep users, data and assets safe. Security of our users, data and assets is always our top priority and we are focused on building an easy to use digital asset trading platform for everyone to enjoy.

The XeggeX platform system is not from some predesigned script package or preexisting codebase. It has been created from the ground up by professional developers. XeggeX has been designed to scale horizontally as we grow to become a top tier exchange.
